

Mining PGP Key Servers

[Cryptome](#): „[Statements](#) in the Bradley Manning trial describe forensics to establish his online behavior and correspondents. Edward Snowden is [reported](#) to have advised his correspondents to use PGP for security. The Bradley forensics and Snowden advice suggests [PGP key servers](#) could be used to establish connections among parties, the so-called [metadata](#) official, commercial and NGO spies siphon, store and mine. The long-running MIT PGP key server is bountiful for this method but so are other PGP and GPG global servers.“
