[Telegraph](#): „Scientists discover how to ,upload knowledge to your brain'“.

„They studied the electric signals in the brain of a trained pilot and then fed the data into novice subjects as they learned to pilot an aeroplane in a realistic flight simulator.

The study, published in the journal *Frontiers in Human Neuroscience*, found that subjects who received brain stimulation via electrode-embedded head caps improved their piloting abilities and learnt the task 33 per cent better than a placebo group.“
