

On the Physics of High-Rise Building Collapses

[EuroPhysicsNews](#) (EPN), ein renommiertes Physik-Fachjournal, herausgegeben vom Dachverband der europäischen Physikgesellschaften, über einstürzende Hochhäuser:

It bears repeating that fires have never caused the total collapse of a steel-framed high-rise before or since 9/11. Did we witness an unprecedented event three separate times on September 11, 2001? The NIST reports, which attempted to support that unlikely conclusion, fail to persuade a growing number of architects, engineers, and scientists. Instead, the evidence points overwhelmingly to the conclusion that all three buildings were destroyed by controlled demolition. Given the far-reaching implications, it is morally imperative that this hypothesis be the subject of a truly scientific and impartial investigation by responsible authorities.
